Energy Surcharge Update – December 2009 Shipments

The US national average diesel retail price for November increased to \$2.7965/gl, exceeding the \$2.70/gl surcharge point established in 2008.

As a result, Bonnell Aluminum is announcing that its December shipments will carry an energy surcharge of **\$0.023/lb.**

Our energy surcharge formula was implemented back in April 2008 following the unprecedented volatility in natural gas and diesel pricing prevailing at that time. We have made this a commitment to monitor this area every month as evidenced by the monthly update on our website and to your web page (see Energy Surcharge Table).

We are very appreciative of your business. If you have any questions with regards to this announcement, please contact your Regional Sales Manager.
